

ETL Engineer

Clarivoy is a marketing technology company focused on applying advanced data engineering and statistical modeling to measure and improve the effectiveness of advertising. Clarivoy delivers unified, unbiased intelligence to advertisers, publishers and agencies in the automotive industry. Clarivoy leverages data to empower customers to know more about their shoppers, make their marketing more efficient and effective, and generate more sales.

Clarivoy is seeking to hire a skilled ETL developer to design and fill a data warehousing environment for our company. Your duties will include consulting with the data management team, reviewing the storage needs of the company, creating a data warehouse, extracting data from company servers, filling the new warehouse, and testing it upon completion.

To ensure success as an ETL developer, you should have extensive knowledge of coding languages and warehouse architecture and be able to clearly communicate your ideas to the company. Ultimately, a top-level ETL developer can create a highly efficient and customized warehouse environment that perfectly suits the data storage needs of the company.

Responsibilities

- Consulting with data management teams to get a big-picture idea of the company's data storage needs.
- Presenting the company with warehousing options based on their storage needs.
- Designing and coding the data warehousing system to desired company specifications.
- Conducting preliminary testing of the warehousing environment before data is extracted.
- Extracting company data and transferring it into the new warehousing environment.
- Testing the new storage system once all the data has been transferred.
- Troubleshooting any issues that may arise.
- Providing maintenance support.
- Other duties as assigned.

Skills and Qualifications

- Bachelor's degree in computer science, computer engineering, or equivalent experience in a related field.
- Extensive knowledge of coding languages, and systems including Python, PostgreSQL, MongoDB, Hadoop, Presto, Pentaho, Google Cloud.
- Proven work experience as an ETL developer.
- Strong project management skills.
- Ability to analyze a company's big-picture data needs.
- Clear communication skills.
- Ability to troubleshoot and solve complex technical problems.

Travel

- This position does not have a regular travel component but periodic attendance at networking events and industry conferences and meet-ups is expected

Location

- This position may be local or remote.

Interested applicants should email hello@clarivoy.com to apply.
